PROJECT DESIGN PHASE:

FULL SOLUTION TEMPLATE

Date	29 September 2026
Team id	SWTID-2026-1394
Team Leader	Rafeena.A
Team Members	Abinesh.S.M, Mohamed Najeeb.M, Samuel.S
Project name	Import Data using Transform Maps (Spreadsheet)

1. Solution Architecture Overview

- **Architecture Flow & Components:**
  - **User Interface**: Web Dashboard where administrators upload raw spreadsheet files (Excel / CSV).
  - **Processing & Mapping Engine:** Backend services that parse spreadsheets and execute Transform Maps to align source columns with target database schemas.
  - **Storage & Security:** Secure database storage for imported records, along with audit logs and access controls to maintain data integrity.

2. Proposed Solution Template

- **Problem Statement:**
  - Importing large volumes of external spreadsheet data manually or without proper field mapping leads to formatting errors, data inconsistency, and huge time consumption.
- **Idea / Solution Description:**

○ Developing an automated system using Transform Maps that allows users to seamlessly map spreadsheet columns to target fields, validate data prior to import, and execute smooth bulk uploads.

- **Novelty / Uniqueness:**

○ Intelligent auto-detection of spreadsheet fields paired with customizable transform rules to prevent data loss and transformation failures.

- **Social Impact / Customer Satisfaction:**

○ Drastically reduces manual errors, saves operational hours for database administrators, and enhances overall data processing efficiency.

- **Business Model (Revenue Model):**

○ Enterprise subscription or tool licensing model for organizations requiring high-volume secure data migrations.

- **Scalability of the Solution:**

○ Built using a modular, scalable architecture capable of handling heavy concurrent spreadsheet imports with optimized batch processing.

3. Problem– Solution Fit Canvas Summary

- **1. Customer Segment:**

○ Database administrators, data analysts, and system integrators handling bulk spreadsheet updates.

- **2. Jobs-to-be-done / Problems:**

○ Migrating spreadsheet records accurately into target tables without schema mismatch errors.

- **3. Triggers&4. Emotions:**

○ Triggers: Frequent requirement to update system records using monthly/weekly spreadsheets.

○ Emotions: Transitioning from stressed/frustrated (due to manual import errors) to confident and in-control.

- **5. Available Solutions&6. Customer Constraints:**

○ Existing Solutions:Manual copy-pasting or basic scripts that lack error-handling previews.

○ Constraints: Complex file structures, strict deadlines, and limited error-tracking options.

- **7. Behaviour&8. Channels of Behaviour:**

○ Users prefer web-based drag-and-drop file upload interfaces with instant feedback logs.

- **9. Problem Root Cause:**

○ Lack of a flexible, unified mapping tool that bridges unstructured spreadsheet layouts with strict target databases.

- **10. Your Solution (SL):**

○ An automated spreadsheet import mechanism powered by Transform Maps that maps, validates, and commits data seamlessly.
